### GeneralAire G99 Air Filter Gage

This is really an amazing item. I checked the patent application for the theory of the device. Amazing. And, it works perfectly. It is extremely sensitive. Best of all, you really don't have to think about numbers. I calibrated it to a new 3M, Filtrete 700 filter and compared it to a precision gage. The calibration mark corresponds to 0.05 inch of water. The change filter mark corresponds to 0.10 inch water. Over the last two months the gage has moved about half of the range so I'll probably get about 4 months out of a filter. At least now I'll know precisely when to change the filter and keep my health.

Note: although the gage is designed for a furnace, I'm using it for an "air scrubber" that I made to collect dust. It consists of a box (20x16x14) with a blower fan inside. (Stanley Multi-Purpose Pivoting Utility Fan) On one end, the box is open and I have a 3M, Filtrete 700 filter, 20x16. I keep the scrubber running 24x7.

Bruce
